Since 1964

Crolla Rubinetterie nasce nel 1964 in Italia nel distretto industriale del Lago D'Orta celebre in tutto il mondo. Nei suoi stabilimenti che si estendono su una superficie di 4000 mq, vengono progettati e realizzati miscelatori per il bagno e la cucina con le più aggiornate tecnologie.

L'evoluzione del gusto ci porta a pensare ad oggetti molto complessi dal punto di vista costruttivo; nuovi materiali, rispetto dell'ambiente e miglioramento delle qualità estetiche e percettive sono aspetti fondamentali.

Le molteplici personalità del gusto oggi ci vedono impegnati a fornire anche linee on-demand che ricalchino le sensibilità più diverse.

Crolla fittings was established in 1964 in Italy, in the industrial district of Lake of Orta, known all over the world. In its industrial establishment which have been enlarged to a 4000 square meter of surface, bath and kitchen mixers are designed and manufactured with the most up-to-date technologies. The evolution of taste leads us to think of very complex objects from a constructive point of view.

New materials, environmental protection and improvement of the aesthetic and perceptual qualities are essential aspects.

Today, multiple personalities of taste, see us committed to provide also on-demand lines that may reflect the most different sensitivities.

I processi di realizzazione di un miscelatore hanno molte fasi tutte egualmente importanti. I controlli elettronici della lavorazione del metallo e dell'assemblaggio sono fondamentali ma l'esperienza del personale esperto non è ancora sostituibile.

Making processes of a tap have many equally important steps.

The electronic control of the metal processing and the assembling phases are fundamental, but the know-how of the experienced staff is still irreplaceable.

Energy saving cartridge system

Nei miscelatori con la sigla **ES** l'utilizzo di una speciale cartuccia muove la leva solo nella direzione dell'utilizzatore, favorendo l'apertura sulla posizione dell'acqua fredda senza attivare inutilmente il riscaldamento dell'acqua.

Inoltre questi miscelatori, non avendo un movimento posteriore, possono essere montati vicino alla parete.

***ES** - marked mixers' special cartridge helps save energy by making water open on the 'cold' position.*

It also doesn't allow the lever to move backward, so that the mixer can be mounted close to the wall.
